

DERMAL FILLERS

JUVEDERM:

VOLUMA

The only hyaluronic acid filler FDA-approved to instantly add volume to the cheek area, and can last up to two years with optimal treatment. If you're looking to plump cheeks that have sunken over time, this injectable is a quick, convenient approach to skin care.

VOLIFT

Delivers a natural look and feel and is excellent for smoothing nasolabial folds. It has an estimated duration of 15 months.

VOLBELLA

The latest advancement in the Juvéderm® range of facial fillers, developed specifically for your lips and mouth area. It is a smooth gel that is injected using an ultra-fine needle. It has been specifically developed as a smooth gel to give a soft, natural feel. The gel fills in lip lines and wrinkles while the hyaluronic acid within attracts and retains moisture, so results can last up to a year.

REVANESSE KISS

Revanesse is a new product created in Canada that we love to use for lips. It uses unique technology –**Thixofix cross-linking**– which can be injected easier, feels more natural, is easier to shape and won't break down as quickly or dramatically as other cosmetic fillers. We have observed that the length of time Revanesse fillers last is comparable to Juvederm products. The difference we have noticed with Revanesse compared to Juvederm, is the swelling of the area is less with Revanesse and recovery time is shorter because the micro beads are rounded, causing less inflammation.

REDENSITY II UNDER EYE FILLER

The best dermal filler that exists for tear trough correction! Teyosyal Redensity II is a thin injectable hyaluronic acid filler designed specifically for treating the under eye area. It has the right viscoelastic properties for filling hollows in the tear trough area. It also contains a mixture of vitamins and anti-oxidants which helps restore skin hydration, promotes skin cell regeneration and evens out the skin tone.
